Why a 2100 mm Turning Circle Is Important

A turning circle of 1800 mm is essential for powered wheelchair users to navigate indoor and outdoor spaces independently.

This radius allows a full 360-degree turn without the need for excessive back-and-forth movement.

Ensuring this clearance in public buildings, bathrooms, doorways, and tight corners supports safe, smooth, and dignified mobility for wheelchair users—empowering independence and reducing physical strain.

Turning Circle Diameter: 2100 mm / 82.68 inches
